# GUIDELINES

- Additions to Guidelines:
  - Anise Oil
  - Fennel Oil
  - Tartaric Acid
  - Triacetin
  - Washed Extracts
  - 2% Total Flavor Chemicals
  - Citric Acid
  - Propylene Glycol

With mitigating ingredients

- Randomly selected tasted samples back to 1991
- Collected and compiled formula information
  - Normalized to 15% abv
- Compared to published use rate in <u>Fenaroli's Handbook of Flavor Ingredients</u>

#### Oetermined:

- Any product containing at least one ingredient present at **5X or greater** than the max use level is unfit for beverage purposes
- Guideline can be used with products containing mitigating ingredients

#### Created an excel database

- FEMA GRAS chemicals
- Max Use Rate
  - Highest value (alcohol and nonalcoholic beverages)

2. Enter the FEMA number. If you do not know it, search the tab 'GRA5 Materials.' Once the FEMA # is entered, the name of the ingredient will automatically appear.

3. Enter the weight of the ingredient. NOTE: The units of total weight and individual ingredient must match.

4. All other calculations will be done automatically. If the amount of the ingredient is at least 5X the Max Use Rate, then the final product is unfit.
