## **Heartbleed Bug Status at TTB**

TTB took immediate action to assess our online systems and have now patched those systems that were vulnerable to the "Heartbleed Bug":

- COLAs Online
- Formulas Online
- Permits Online

All three systems provide the capability for self-password management, and as most security professionals suggest, **we too recommend that you change your password(s)**.

We appreciate your patience with this process and assure you that safeguarding your data is our top priority.
